

Absolute Poverty Incidence (%) In Italy by Area and Household Type

The incidence of absolute poverty is computed as $\frac{\text{households in absolute poverty}}{\text{total of the households in the unit}}$

The most recent values available (2021) are compared with the ones of 2017 and with the national averages of both years.

National incidence of absolute poverty for all the household types in 2021

7.5%
6.9 in 2017

Area of Italy

Household type

The point with black border shows the national average in 2021.

The coloured area indicates the incidence of absolute poverty in 2021 for the group

The white and green diamond provides the national average in 2017

The dashed border represents the incidence in 2017

*For some household types in Central Italy, values for 2017 were not available. They are substituted as follows:

1 person household 35-64 - 2016 | 1 person household 65+ - 2018 | Single-parent - 2020

	2021			
	N	C	S+I	Italy
Foreigners-only household	30,2	25,9	37,6	30,6
Household with minor(s)	10,6	9,7	13,7	11,5
Single-parent	9,8	8,3	11,2	9,9
Household with 1 minor	6,6	6,5	11,3	8,1
1 person household 35-64	6,5	4,2	8,3	6,4
Italians-only household	4,3	3,7	8,8	5,7
Household with elderly	4,7	3,4	8,1	5,5
1 person household 65+	4,9	2,8	7,1	5,1
All households	6,7	5,6	10	7,5
